品牌故事

ANPASSA (艾柏斯)

「獨立製錶品牌」

ANPASSA (艾柏斯) 源出於瑞典名詞，有「訂製」的意思！品牌的製錶師為追求崇尚的藝術品，透過獨立製錶理念以頂尖的科技配以珠寶工藝為客戶設計出與別不同的高級腕錶。以人手打造細膩工藝、雕塑演繹藝術的獨立性、把藝術的美學與腕錶融為一體是品牌的創辦目標。對於腕錶愛好者及收藏家而言，ANPASSA期望透過其獨立製錶理念，以突破製錶界限、創造個性化傳奇，為追求高質素及個性化的客戶訂製出專屬的高級工藝腕錶，打造出仗心獨韻的迷人故事。

Brand Story

ANPASSA (艾柏斯)

"Independent Watchmaking Brand"

ANPASSA takes the name from the Swedish word for "custom-made" and "adjusted" tactfully implying at the concept of the brand. The watchmaker is aspired to produce the high-end watches embodying the inventiveness, the top-notch technology and the exquisite craftsmanship. Excellent hand craftsmanship promises to elevate art to a new level. By pushing the boundaries of innovation, ANPASSA purses a mission of producing high quality personalized watch integrating design, watchmaking artistry and exceptional expertise for all watch lovers and collectors, and creating a fascinating story behind the innovative piece.

Care for your ANPASSA Tourbillon Watch

To maximize the enjoyment of your ANPASSA watch, care should be taken to avoid moisture, dust, and shock. Normally, all you need to do is clean the watch with a soft cloth. On gold plated models, clean with a soft cloth dampened with warm water.

Precision-Made Parts

Your ANPASSA watch has precision-made parts with tolerances of up to 1/1000mm. A small particle of dust is enough to stop the timepiece from functioning properly.

Dust can enter the watch if the case or crown is not intact. If you do not wear your watch for a prolonged period of time, store it in its original box in a dry place.

Never open the watch yourself. Doing so could allow dust and moisture to enter the watch case or could cause damage to the gaskets, the movement, or the case.

Water Resistance

Your ANPASSA watch is tested to meet ANPASSA's quality standards. Water resistance is achieved by installing seals between the major parts of the watch case. Your watch is fitted with a series of gaskets and a specially designed crown which together seal the watch and prevent moisture from entering the case.

Shock-Resistant

All ANPASSA timepieces have shock-resistant movements tested to meet ANPASSA quality standards. As a precaution, care should be taken to avoid wearing your watch while engaging in rough sports to prevent possible damage.

Sapphire Crystals

Your watch is equipped with two sapphire crystals. The procedure for manufacturing sapphire crystals is very complicated and precise.

The hardness is about HV 2200 degrees, making it scratch resistant and virtually indestructible. Although the sapphire crystal is scratch resistant, care should be taken to avoid dropping or hitting the watch on a hard surface.

Magnetic Fields

The exposure of your watch to strong magnetic fields will affect its timekeeping accuracy and may cause it to stop all together. Therefore, care should be taken to avoid subjecting your watch to strong magnetic fields.

Leather Straps

The genuine leather straps on your watch are handmade. The leather skins used are specifically selected to match the beauty of each ANPASSA watch. Leather needs care. Care should be taken to avoid exposing your straps to water or high humidity to avoid the straps from becoming brittle.

The life span of the straps depend on your care and wearing habits as well as the climate in which you live.

Winding

- With the crown in, turn the crown clock wise all the way until strong tension is felt.

Time Setting

- Pull the crown all the way out.

- Adjust the time by turning the crown so that the hands move in a clock-wise fashion.

- Then push back the crown all the way in.

"Running In" Your ANPASSA Watch

The first thing you should do after acquiring an ANPASSA timepiece is to "run the watch in" by wearing it everyday. Mechanical watches need to run for a certain time until they become stable.

ANPASSA WATCH COMPANY "runs in" its watches under controlled conditions at the production stage, checks the rate of the movement using a timing machine, and observes its behavior over a certain period of time, and if necessary, adjusts the rate.

This usually takes place at room temperature and with simulated sequences of movements. On the wearer's wrist, however, conditions may be completely different, which would result in a different rate from the one recorded during the test at the production stage.

Rate Tolerances of Your ANPASSA Watch

Before a ANPASSA timepiece leaves the factory, the movement is tested in five different positions:

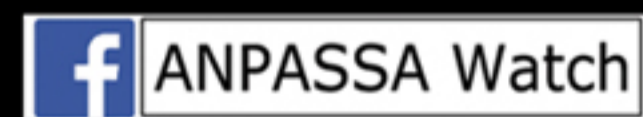

- Dial Up
- Dial Down
- Crown Up
- Crown Down
- Crown Left
- Crown Right

Note: Due to the very nature and complexity of the tourbillon movement, the rate will never be as precise as a quartz watch but may approach that of a chronometer watch.

A. Manual winding tourbillon store power for 38 hours after fully winding.

B. Automatic tourbillon store power for 38 hours after fully winding. Movement can continue to run automatically for wearing over 8 hours daily and thus winding is not necessary.
